HOW TO RETRIEVE VIDEO FROM THE 9CH DVR

Remote controller must be used.

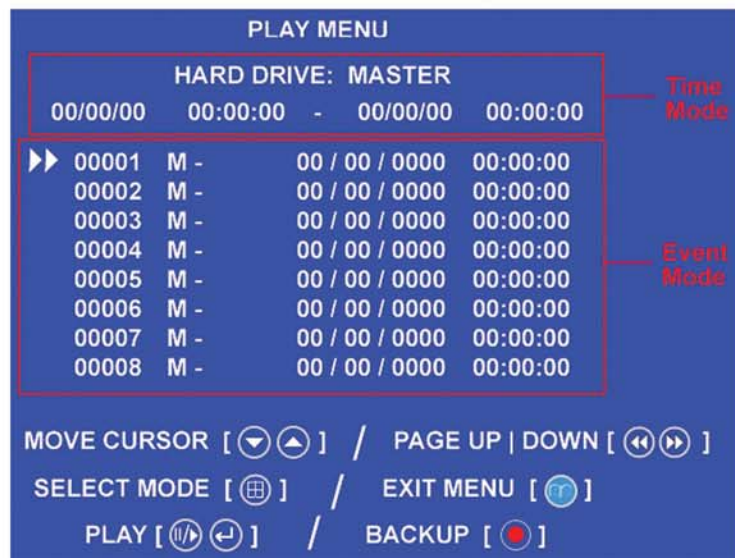

Backup cannot be obtained while the DVR is recording. Press [⏏] and enter password to stop recording.

Default password is 111111

Insert a USB key into the USB port on the side of the DVR.
An icon will appear on the screen (bottom left) confirming the USB key has been recognized.

Press [⏏]

There are two modes of backup either by time or event. Press [⊕] to switch between modes.

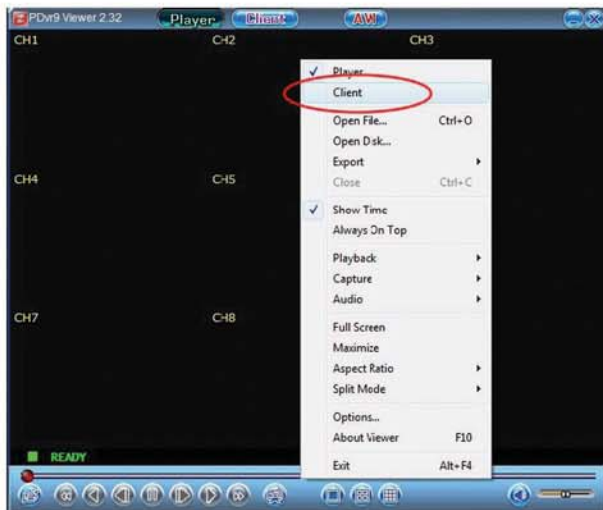

Time mode:

Move to the date/time required by pressing [⏪] [⏩]. Use [⏮] [⏭] to change numbers.
Press [⏏] to go to the next screen.

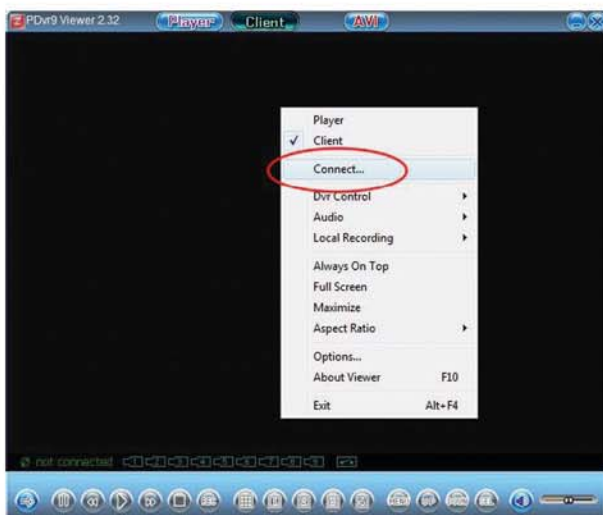

Event mode:

Move to the event required by pressing [⏮] [⏭] and press [⏏] to go to the next screen.

HOW TO VIEW DVR OVER A NETWORK (9 CH)

Right click on the screen and then click “Client”

Right click on the screen and then click “Connect”

Enter details and then click “Login”

VIEWING AND CONVERTING THE VIDEO ON A USB DRIVE

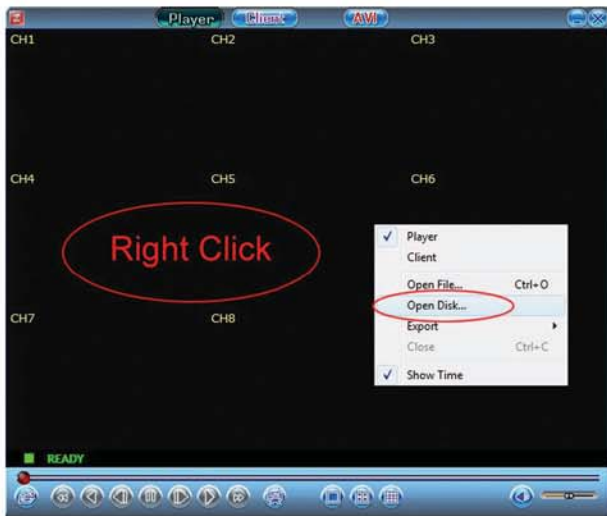

Please visit www.valleytec.com and download the latest software for your DVR

Insert the USB key into the computer.

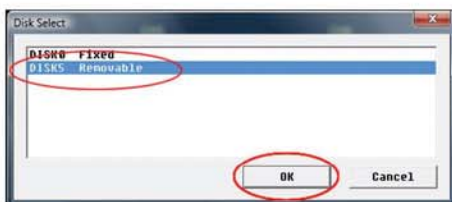

Cancel any screens that may tell you to format the key.

Open the player for the DVR (downloaded or on the CD).

Right click in an open space on the screen.
Click on "Open Disk"

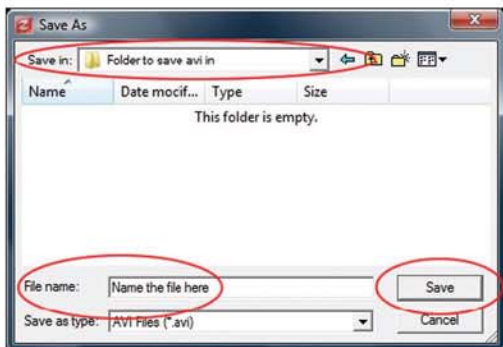

Select "DISKS Removable".
Click "OK".
The video will now automatically play.

CONVERTING VIDEO FROM USB DRIVE TO AVI (PLAY IN WINDOWS MEDIA PLAYER)

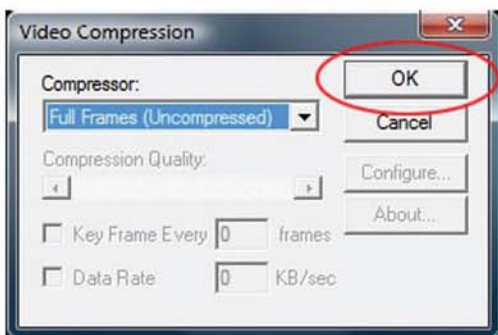

Play the video.

At the point in the video you wish to start the conversion, click the “AVI” button at the top of the player (Click it again to stop Conversion).

Select where to save the converted file and name it.
Click “Save”

Click “OK”
The file is now converting to AVI.
